

UST Boot Camp

3 1/2 Day Seminar - 8:30 am to 4:30 pm (12:00 the final day)

Unique Daily Hands On Experience in our Training Facility and an Offsite Venue

See Website for Schedule, Instructor Information and Registration

I found the UST Boot Camp to be an excellent training course, with mixture of hands on field study and informative speakers, covering details not normally covered in most classes. Especially helpful was noting the proper placement of tank and piping sensors and ability of printing of "setup" on tank monitor, enabling determination of nearly all tank system specifications.

Senior UST/UIC Field Inspector

Purpora Engineering conducted UST Boot Camp for the State of Washington. The training was everything we had hoped for and was well received by our UST staff. Both experienced staff and staff newer to the UST world learned a lot from the training.

658 N. Progress Dr.
